

Feature Updates

Link: <https://help.gpsinsight.com/driveri-portal-updates-june-2020/> Last Updated: June 12th, 2020

The following updates are now available in the Driveri Portal.

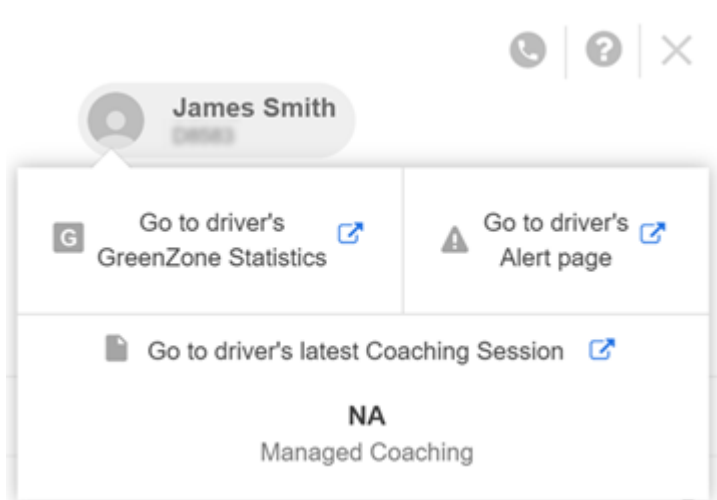

What's New

Alert Cards

Users can now see other driver-related information straight from the Alert Video Player. This new feature allows users to easily view the following driver information:

- Greenzone Score trend as compared to the fleet trend
- Compliance trends for stop signs, traffic lights, following distance, and speeding
- Alert profile page to see alert information specific to that driver
- Most recent Coaching Session, whether pending or completed
- Most recent Virtual Coaching Session, if enabled

To open the new links, hover over the driver's name. Each link opens the specific page in a new tab to help gain deeper insight into a driver's performance.

Driver Group and Fleet Comparison Report(s)

The **Group Comparison Report** allows a user to compare Greenzone scores, as well as pertinent safety data such as completed coaching sessions, number of DriverStars, and number of Alerts for selected groups.

- A user can select any or all groups when preparing the report and it also can be exported as a .csv file for further analysis.
- This is available on the portal under the Driver Group Selector.

The **Fleet Comparison Report** is also available for customers with separate fleets in their organization. This report provides similar information as described above and is available in the portal under the fleet selector.
