

Here's what's new for Driveri!

What's New

Portal

Support for Custom Roles

- The “Roles” page has been added to Provisioning & Configurations. Tenant SuperUsers can create “Custom Roles” by disabling one or more privileges from any of the pre-defined base User Roles. The Roles page can be used to view all roles in the system and create or update custom roles.
- Custom Roles are useful when Fleets require users to manage certain operations that are different from the pre-defined roles. When a custom role is created, it becomes available as a Role option when creating or editing users.
