The following release notes are for ELD Focus Mobile app users.

ELD Focus Mobile Updates

- Canadian ELD Data
 - Accept and store CAN ELD Provider, CAN ELD Authentication, and CAN ELD Certification from VDS
 - Add fields to mobile log details for: Unidentified Driving Records (DD5 status), Active ELD Malfunctions, Active Data Diagnostics
 - Change recording order for PC + OFF and PC/YM Cleared + new duty status: OFF before PC and PC/YM Cleared before new duty status
 - Display Canadian ELD values on mobile System Details: CanELDAuthentication, CanELDCertificationID, CanELDProvider
 - Display Exempt Driver Status in mobile log details: ELD Exempt - "E-Exempt," Non Exempt Driver - "0 - Non - Exempt"
 - Display mobile log details Record Date in MM/DD/YY format
 - Display Time Zone Offset from UTC in HH:MM format for Canada
 - Split display of Co-Driver Name and Co-Driver ID in mobile log details
 - Update order of items on mobile log detail screen to match Canadian ELD requirements
- Canadian ELD Functionality
 - Add Data File Transfer button to driver overview and option to mobile DISPLAY_SCREEN API
 - Prevent ability to certify logs while in PC
 - Update maximum speed threshold to exactly 32 km/h (19.88 mph) for yard moves mode
- Driver Log Certification
 - Fix for driver logs becoming uncertified due to a discrepancy in rounding elapsed engine hours
 - Fix for driver logs becoming uncertified due to PC/YM Cleared events carrying over to subsequent log days
 - Fix for driver logs becoming uncertified due to sorting of multiple annotations
- ELD Event Recording
 - Record intermediate log to both primary and co-drivers' logs 60 minutes after last status change or intermediate log while the vehicle is in motion
- HOS Regulations
 - Allow US 7- and 8-day passenger-carrying drivers to take CDL Short Haul exception, including auto-apply option
- Miscellaneous
 - Change app logging level to debug after an application crash
- Mobile APIs
 - Add HOSRULESET_CHANGED broadcast to notify integrated applications of the driver's active rule set (driver type)
 - Broadcast DISPLAYED_DRIVER_CHANGED intent regardless of whether eFleetSuite is in the foreground

ELD Focus Mobile Release Notes

ELD Updates

Link: <https://help.gpsinsight.com/eld-focus-mobile-release-notes-6-4-2021/> Last Updated: April 7th, 2021

or background

- Mobile Communications
 - Fix for Android OS 4.2 devices failing back to unsecure comms, allow use by TLS 1.0/1.1 for these devices
 - Fix for devices displaying Unable to Reach Host after communication is restored following an unexpected network disconnect
- Mobile Log Editing
 - Do not uncertify a prior day's log during mobile log editing if the only change is to the end time of the carryover event
- Unidentified Driver Events
 - Allow driver to accept or reject a non-driver host user's proposed "undo" for an unidentified driver event
- Yard Moves Mode
 - Increase limit of yards sent to a mobile device to 30,000

Bug Fixes

- Fix for a crash occurring when the Availability Details drawer was left open for an extended period of time
- Fix for rest break not being ended appropriately if the driver is automatically changed to driving status
