

Feature/Functionality Changes & Updates

□ Map

- **Map Pop-Over Update:** Linked track-point pop-overs to their corresponding events in the Activity Panel for improved context and navigation.

□ Portal

- **Navigation Component Updates:** Implemented new navigation components for the Portal Navigation Menu to align with the latest design specifications.
- **Navigation Icon Updates:** Updated icon colors for rest, hover, and active states in the Portal Navigation Menu to match the updated visual guidelines.

⚙ Maintenance Page

- **Service Due Tab Update:** Added new data columns to the *Service Due* tab on the Maintenance Page: Status, Due In, Average Daily Usage, Days, and Due On.

□ Alerts

- **Low Battery Alert:** The Low Battery Alert is now available for ST-600/TT-600 devices.

Driveri Updates

□ Driveri Updates

- **Official Launch of GreenZone Score V4:** GreenZone Score V4 is officially live. This is a major upgrade designed to enhance your driver safety experience. This new version offers several key improvements:
 - **Enhanced Explainability:** Understand exactly how your score is calculated with detailed explanations of event impacts.
 - **Greater Customization:** Tailor the system to your specific needs with custom date range reporting.
 - **Increased Comprehensiveness:** Benefit from a more comprehensive scoring system that includes additional event types.
 - **Enhanced Correlation:** See a stronger correlation between your GreenZone Score and actual fleet safety risk.

DriverStreaks contribute to a positive score improvement when GreenZone V4 is enabled.

Note: *The opt-in period for GreenZone V4 has now ended, and the official transition has been made as of April 07, 2025.*

Bugs Squashed

□ Reports

- Resolved an issue where the State Mileage report occasionally displayed incorrect state information
- Addressed an issue where the state field was occasionally blank in the State Mileage Report
- Fixed an issue where the CSV file was not attached when reports were sent via email
- Fixed a bug where the option to exclude deactivated vehicles was not retained in the State Mileage report

⚙ Maintenance Page

- Fixed an issue where maintenance services were not updating correctly
- Resolved an issue that prevented the ability to add new maintenance services

□ Classic

- Fixed an issue where the disabled “Temperature” option in the Diagnostic Access List was not functioning as expected in **Manage Vehicles > Manage Visibility of Diagnostic Data**

□ Alerts

- Resolved an issue where DTC Alerts were incorrectly triggered for Lamp On - Check engine light on (Active Only) conditions
- Fixed a bug where the Overdue Alert was not triggering as expected

□ Map

- Fixed an issue where drivers without a RefID were being repeatedly assigned to the same driver profile
- Updated speed logic to handle invalid values more intelligently, avoiding defaulting to 6 mph in all cases

□ Safety Camera

- Fixed an issue preventing Drive360/AIR II video clip downloads
