

Portal Feature/Functionality Changes & Updates

□ Map

- **Edit Vehicle Panel Reorganization:** The Edit Vehicle panel has been updated with collapsible sections and reorganized formatting for the Map Page and Admin: Vehicles tab, including a new Hierarchy Membership section, default-collapsed Contact Information, added background color, and visual separators between sections.
- **Customizable Map Lists:** Users can now reorder lists (e.g., Vehicles, Assets, etc.) on the Map page to better match their business needs.
- **History Date Range Limit:** The Map page History tab now prevents selecting date ranges greater than 7 days, aligning with system limits to avoid map overload and providing a clearer, more reliable user experience.
- **Device Configuration Access Update:** The Configure Device option has been removed from the Vehicle Card panel Overflow (...) menu and is now available in the Edit Details panel (accessible from Admin: Vehicles and the Map Vehicle Card), shown only for supported CalAmp devices. See [Configuring Device Thresholds](#) for additional information.
- **Hierarchy Management on Map Vehicle Card:** Enterprise and Advanced Admin users can now manage Hierarchy Membership directly from the vehicle card on the Map page, including viewing current membership, removing nodes, and adding a vehicle via a hierarchy selector that pre-selects existing membership and enforces one-node-per-tree rules.
- **Custom Vehicle Icons in Vehicle Panel:** Vehicle panels now display a vehicle's custom icon when one is selected, and continue to show the default vehicle icon when no custom icon is applied.

□ Alerts Page

- **Improved Low Battery Alert for TT-600s:** The Low Battery Diagnostic type option available in the Diagnostic Alert has been updated to use the new, more accurate battery percentage value from TT-600 firmware, renamed to "Low Internal Battery (TT-600s)", restricted to TT-600 devices only, and now triggers when battery capacity is $\leq 20\%$ (default).
- **Low Fuel Level Diagnostic Alert:** Added Low Fuel Level as an available Diagnostic type option in the Diagnostic Alert.

□ Maintenance Page

- **Maintenance Search Behavior:** Searches on the Maintenance page only result in data from enabled table columns, ensuring results reflect only the visible columns.

Bugs Squashed

□ Map

- Resolved an issue where the calendar selector from the History tab of the Map page could save an incorrect date if the user's computer is set to a time zone outside of Arizona/MST.

□ Camera Media Page

- Resolved an issue where collapsed days could appear incomplete or missing in the Media Library, ensuring events load and group correctly by date when switching date ranges or collapsing/expanding days without requiring additional scrolling.

□ Cameras

- Resolved an issue where users with camera permissions set to None could still view camera events.

□ Explore Page

- Updated the Continue button icon styling in the Schedule an Install with Techsbook pop-up for improved visual alignment.

□ Reports Page

- Resolved an issue where selecting a driver, driver group, or driver hierarchy incorrectly ran the vehicle version of the Driving Violations Report.
