

Portal Feature/Functionality Changes & Updates

Map

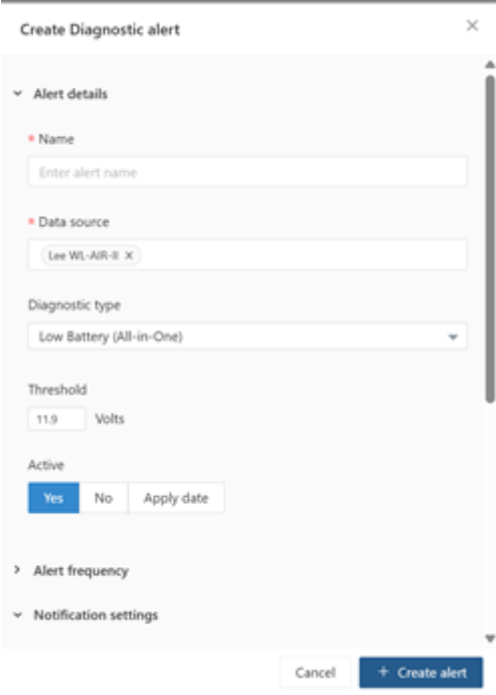

- **Custom Default Group Selection:** Users can now set a default Group or Hierarchy (Advanced Admin/Enterprise Only) in User Preferences to replace the system-wide “All Vehicles” default. This setting persists across sessions, logins, and devices. It can be configured to apply to the Map, Reports, and Alerts (by default), to the Map only, or to Reports and Alerts.

Side-bar Theme	<input checked="" type="radio"/> Dark <input type="radio"/> Light

Alerts Page

- **Low Vehicle Battery Alert for Air II Devices:** Select the Low Battery (All-in-One) option when creating a diagnostic alert to be notified when your Air II device reports vehicle voltage below a defined threshold. The default threshold is 11.9V, and can be customized to meet your needs.

□ Reports Page

- **Improved Date Range Clarity for New Reports** A new Date/Time label now displays the exact dates included in the report, and an “Include Today” checkbox (available for select Detail reports only) gives users more control—while remaining disabled for Summary reports to ensure reporting consistency.

Bugs Squashed

□ Map

- Resolved an issue where EV Charging Station map pins could shift position when moving the map.
- Resolved an issue where selecting **Open in Google Maps** from the Vehicle Card could direct users to an incorrect location when the vehicle was traveling on certain highways.
- Improved visibility of the Play button in the Map History tab. The Play control is now clearly visible without requiring hover, making it easier to replay vehicle history.

□ Reports Page

- Resolved an issue where the Driver Scorecard could display incorrect data or an inaccurate date range when using a custom date selection and changing the time zone.

- Addressed an issue where New reports did not consistently include current-day data when using predefined date ranges.
- Corrected a display issue in several alerts and reports where the “Include Today” option appeared partially disabled. The checkbox and label now display consistently across all affected reports and alerts.
- Removed the Date Range filter from the Odometer History report as the report does not support date range parameters.

□ Camera Media Page

- Standardized the 3-dot action menu to display without a border box on listed clips for a cleaner, more consistent user experience.

□ Maintenance Page

- Corrected a UI issue on the Maintenance page where the selected radio button option wasn't fully highlighted.
