

□ Portal Feature/Functionality Changes & Updates

□ Map

- **Battery Capacity:** TT-600 and BeMini device users can now view remaining battery percentage directly on the associated Vehicle Card, making it easier to know when to replace or recharge the battery.

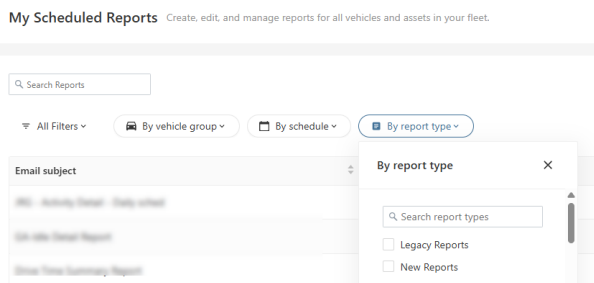

□ Camera Media Library

- **Face Blur:** AIR II camera users can now enable face blurring for the driver, passenger, or all occupants directly in Settings. Blur is applied at the device level, with no facial data recorded or uploaded to the cloud, while AI DMS events, such as drowsiness detection, continue to function normally.

□ Reports Page

- **Report Filter:** Added a Legacy/New filter to the Scheduled Reports table, making it easier to distinguish between report types at a glance.

- **Scorecard Weighting:** Normalized scoring weight field values to ensure consistent data types are sent to the endpoint, resolving inconsistencies between string and numeric formats for the Driver Scorecard Report.

Bugs Squashed

Map

- Fixed an issue where the zipcode failed to auto-populate when using the suggested address feature on the Create Landmark and Edit Landmark Cards.
- Fixed an issue where the navigation menu's collapsed/expanded state was being stored incorrectly.

Maintenance Page

- Fixed a UI issue where the Actions column overflow menu options floated out of position while scrolling on the Maintenance page.

Cameras

- Fixed an issue where some vehicles displayed random camera events instead of their own assigned events from the Camera Events section of the Vehicle Card.
- Fixed an issue where two events appeared simultaneously for the same vehicle in the Camera Media Library, with one showing as unavailable.

Admin Page

- Fixed an issue where Driveri ID and Driveri Groups were missing from the Edit Driver card of the Admin: Drivers tab.
