

Feature/Functionality Changes & Updates

Map

- **New Address Suggestion - Landmark:** Added the ability to decode latitude and longitude into a suggested address when creating a landmark.
- **Improved Icon Selection in Portal:** Users can now select from a full list of named icons for their Vehicles in the Portal. Previously, icons had to be manually named in Classic, and unnamed icons would not appear in the Portal. With this update, we've preemptively named the available icons in Classic, making them immediately usable in the Portal without user intervention.

Alerts Page

- **Diagnostic Alert Adjustment:** Adjusted the default “Low Internal Battery” threshold from 3.6V to 3.8V to ensure Diagnostic alerts are sent before the battery loses sufficient power to transmit them.

Camera Media Library

- **False Trigger Reporting for AIR II AI Video Clips:** Users can now report false triggers on AI-generated video clips from AIR II cameras. This applies to events automatically triggered by driving behavior (e.g., phone usage, harsh turning).

Bugs Squashed

□ Map

- Fixed an issue where the wrench icon on the map was either incorrectly shown or missing for vehicles with due or completed services

⚙ Maintenance Page

- Fixed a bug where devices were incorrectly labeled as “Due Soon” despite being above the set threshold away from their service due threshold

□ Cameras

- Fixed an issue where driver assignment data was not properly replicated to the Driveri Portal
