

ELD Updates

Link: <https://help.gpsinsight.com/hos-server-update-version-10-2/> Last Updated: February 19th, 2020

This announcement for GPS Insight includes updates for HOS server software (Version 10.2)

HOS Server Update - Version 10.2

New Features

The following new features are available with this HOS server update:

HOS Data:

- Mark previous event(s) as Inactive - Changed instead of overwriting when a driver changes status multiple times in the same minute.

HOS Regulation Support:

- Host support for Canada N of 60N Cycle 1 driver type.
- Host support for California 8-day agriculture driver type.

Import/Export:

- Allow Excel export of Log Edit Report
- Allow Excel export of Uncertified Logs Report
- Allow Excel export of Conflicts Report
- Allow Excel export of the Unidentified Driver Report
- Allow Excel export of Exception Report
- Update Driver import for ELD compliance
- Update Home Terminal import to support new time zones
- Update Locations import to allow column headers and improve error reporting
- Remove option to import devices
- Prevent import from adding multiple home terminals with the same name

Log Edit Report:

- Re-implement the Log Edit Report for ELD

Yard Moves Mode:

HOS Server Update - Version 10.2

ELD Updates

Link: <https://help.gpsinsight.com/hos-server-update-version-10-2/> Last Updated: February 19th, 2020

- Increase yard radius limit to 10mi (FMCSA clarification)
- Limit the host to only send up to 5000 yards to a mobile device

Other Improvements

The following improvements accompany this update:

- Fix for a bug preventing a user from having their DVIR access restricted by Service Location.
