

HOS Server Update – Version 9.1

New Features

The following new features are available with this HOS server update:

- ELD Exempt:
 - Addition of an “ELD Exempt – Timesheet” driver type that allows an exempt driver to use the rest break button
 - Update driver details screen for options to choose one of many ELD exempt rulesets
 - Allow assignment of unidentified driver events to ELD Exempt drivers
 - Update ELD Exempt annotation field for clarity when setting up an ELD Exempt driver
 - Display ELD Exempt drivers on host driver logs, data file transfer, and unidentified driver resolution reports
 - Host Help:
 - Clarify host help for Locations to specify minimum radius
 - Auto-Applied Annotations:
 - Add organization configuration to allow a driver to add an automatic annotation when changing to ON or SB status on the mobile device.
-  **Note.** A mobile device software update may be required.
- Driver Portal:
 - Enable web access (driver portal) for all drivers and remove option to disable access Driver Role Selection
 - Add organization configuration to enable driver role selection on mobile devices
 - HOS Reports:
 - Update availability report column headers for clarity and add reference to verify device connectivity
 - Off Duty Sign In:
 - Add organization configuration to allow a driver to sign in and change status to Off Duty on the mobile device
 - Yard Moves Threshold:
 - Add organization configuration for customizable Yard Moves speed threshold

Other Improvements

The following improvements accompany this update:

- Prevent host users from editing vehicle Asset IDs on the host
- Fix for IE and FF allowing a driver to be saved with no primary driver type selected
