

ELD Updates

Link: <https://help.gpsinsight.com/hos-update-eld-mobile/> Last Updated: May 22nd, 2019

This announcement for GPS Insight includes updates for HOS server software (Version 8.1) and ELD Mobile (Version 1.9).

HOS Server Update – Version 8.1

New Features

The following new features are available with this HOS server update:

- Multiple USDOT:
 - Allow the creation of multiple carriers within an organization, each with a unique USDOT Name and Number
 - Allow organization administrator to set default carrier
 - Assign drivers to carriers (administrator would be allowed to assign drivers from one carrier to another at any time, an Annotation will be added to the log when the driver is switched between carriers, to be clear this is not a setting that can be changed by the driver at will)
- HOS Violations and Warnings:
 - Add option to show HOS violations in driver logs (host Driver Logs page only)
- 100/150 Air Mile:
 - Allow US 7-day Oil Field and US 8-day Oil Field driver types to take the 100 Air Mile exception
 - Allow US 7-day Construction and US 8-day Construction driver types to take the 100 Air Mile exception

Performance Improvements or Bug Fixes

The following performance improvements and bug fixes accompany this update:

- Performance optimization for Print Multiple Logs
- Performance optimization for Availability Report
- Disable Save and Cancel buttons on Change My Status page upon click (prevent button mashing)
- Clear the auto-applied exception setting when drivers are changed to ELD Exempt
- Prevent a driver's log from becoming uncertified due to a corner case with multiple events in the same

ELD Updates
