Driveri Hub-X Monitor: Automatic Camera Switch Adapter

Link: https://help.gpsinsight.com/installation-guide/driveri-hub-x-monitor-automatic-camera-switch-adapter/ Last Updated: May 8th, 2026

The Automatic Camera Switch Adapter is designed for use with Moffett trailer setups, giving you a seamless way to monitor camera feeds without any manual switching.

The most common use cases include single cab vehicles operating with multiple trailers, or setups that include a Moffett trailer specifically.

Here's how it works: when the Moffett is attached to the trailer, your monitor will automatically display the feed from the Moffett-mounted camera. Once the Moffett is detached and off the trailer, the monitor switches over to the trailer camera — no input needed on your end.

Before You Begin

Before proceeding with this installation, please refer to the following guides to ensure your system is properly set up:
