

**Note.** The TT-600 device is discontinued as of January 2026. The TT-610 device is active. For best results, register this device type as an Asset. If registered as a Vehicle, trip data accuracy may be impacted due to the lack of a direct ignition connection.

## Before You Begin

The installation kit contains a registration card, the TT-600 series device, 2 well nuts with screws, and two self-tapping screws.

Additional tools and supplies you may need include a fine-tip marker, centerpunch, and a ladder.

For device activation and registration, obtain the Install Key from your GPS Administrator and bookmark the Verify GPS Web App (<https://verifygps.gpsinsight.com>) on your smartphone.

## Installation Overview

The following steps provide an overview of the installation process:

1. Install Preparation.
2. Device Mounting.
3. Activation and Registration

## Installation Steps

### 1. Installation Preparation.

1. Complete the registration card by locating the 19-digit serial number.

2. Identify a suitable mounting location that is horizontal to the ground, has an unobstructed view of the sky, is not a removable panel, and will not be damaged during normal operation of the asset.

**Note. Covert Installation:** Though the device may report accurately in covertly installed locations, we do not recommend this type of installation due to the potential for lost data and/or diminished battery life.

3. Inspect the area directly beneath the mounting location to ensure nothing will be damaged during installation.

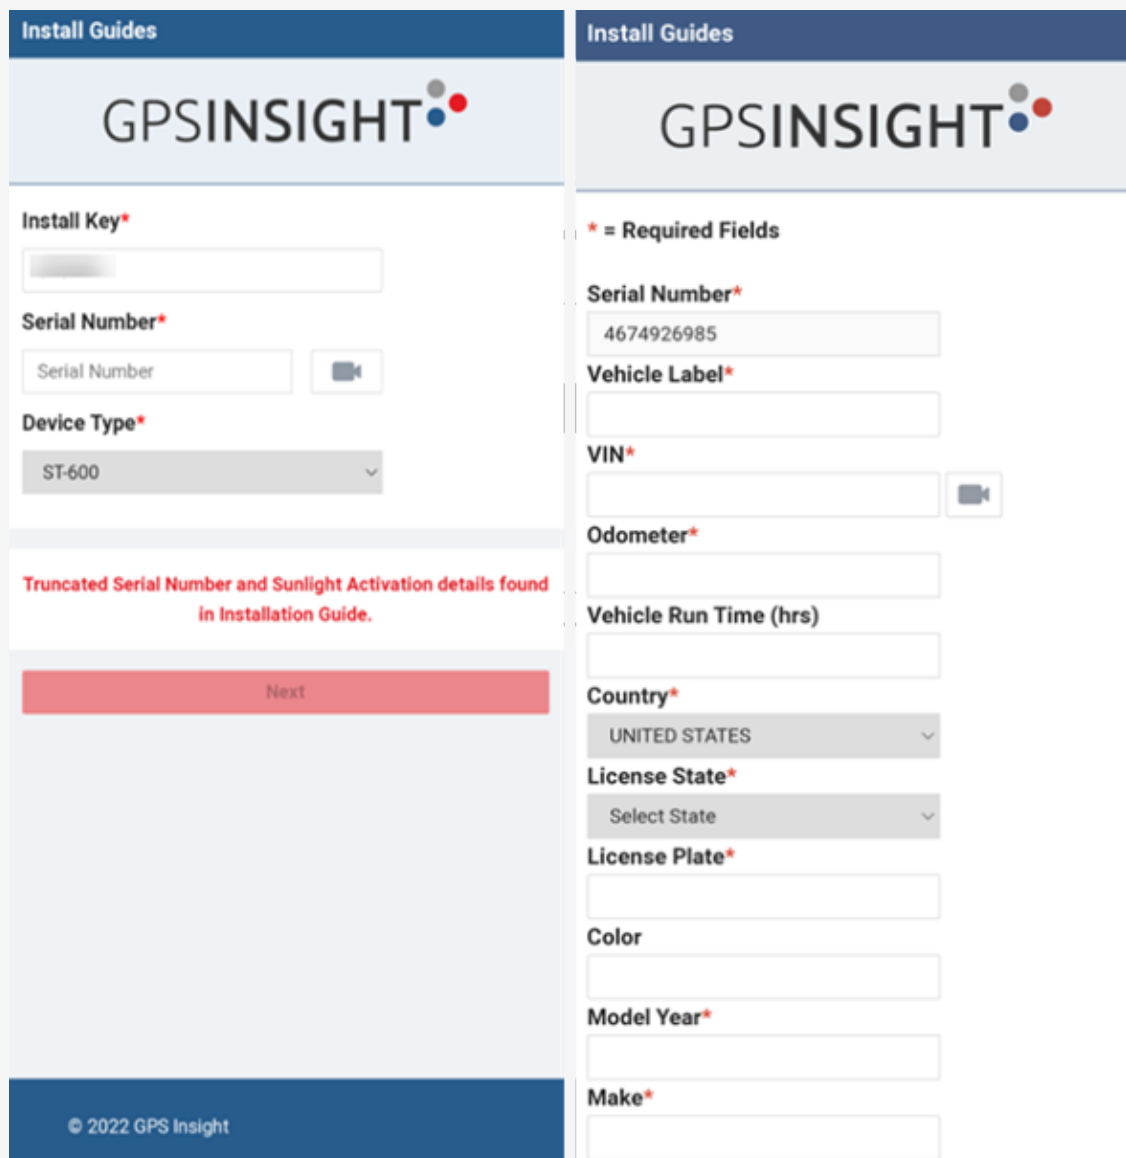

## 2. Device Mounting.

1. Position the mounting bracket and mark the position of the two holes.
2. Secure the device to the asset with screws.

## 3. Activation and Registration.

1. Open the [GPS Insight VerifyGPS Web App](#) via your smartphone or computer, then enter following information and follow the prompts to register the device.
  - Enter your Install Key.
  - Enter the Device Serial Number.
  - Select Device Type: TT-600.
  - Click 'Next' and follow the prompts to verify and register the device.

The screenshot displays the registration interface for the GPSINSIGHT TT-600 series. It is divided into two main sections. The left section contains the following fields: 'Install Key\*' (text input), 'Serial Number\*' (text input with a camera icon), and 'Device Type\*' (dropdown menu showing 'ST-600'). Below these is a red message: 'Truncated Serial Number and Sunlight Activation details found in Installation Guide.' At the bottom of this section is a prominent red 'Next' button. The right section, titled '\* = Required Fields', lists the following fields: 'Serial Number\*' (text input with value '4674926985'), 'Vehicle Label\*' (text input), 'VIN\*' (text input with a camera icon), 'Odometer\*' (text input), 'Vehicle Run Time (hrs)' (text input), 'Country\*' (dropdown menu showing 'UNITED STATES'), 'License State\*' (dropdown menu showing 'Select State'), 'License Plate\*' (text input), 'Color' (text input), 'Model Year\*' (text input), and 'Make\*' (text input). The footer of the form shows '© 2022 GPS Insight'.

- Upon successful registration, give the registration card to your GPS administrator.
