VerifyGPS Web App (Installation Verification App) - Device Swap Feature

The Device Swap feature is now live in the **VerifyGPS Web App**.

If a user attempts to register a device wherein the VIN and Vehicle Label are the same then the app will automatically treat it as a device swap, copying over the applicable items related to the vehicle profile once the verification process is complete.

Vehicle Profile items include:

- Group and tree memberships
- Attributes
- Inputs
- Alerts
- Scheduled Reports
- Current Driver Assignment
