This Product Features and Updates announcement for GPS Insight **Pro/Enterprise** includes updates for Reports.

Reports

Idle Time Summary Report - Custom Metric Data

The **Idle Time Summary Report** includes the option to add **custom metrics** as additional columns in the report.

The screenshot shows a configuration panel for a report. It includes an 'Options' section with a 'Minimum Idle' dropdown set to '5 minutes', and checkboxes for 'Vehicles' (Show All, Hide Drivers, Hide Details), 'Fuel Unit Cost' (United States), and 'Show current location'. Below this is an 'Attributes' section with an 'Add Attribute' dropdown. A highlighted 'Custom Metrics' section contains a 'Max Speed' metric with a circled 'M' icon and an 'Add Custom Metrics' dropdown. A 'Run Report' button is at the bottom right.

If you add a metric to a report that uses the same label as another column title in the report, the metric column includes an **(M)** designation (see below).

Additionally, note that this particular metric data (Max Speed) provides daily summarization data that is **averaged** for the time period selected; therefore, the values may vary from other report columns with similar labels. In the example below, the Max Speed column on the left shows the maximum speed cited during the report period, whereas the metric column shows the average maximum speed cited during the report period. All other metrics use sum instead of average.

Product Features and Updates - 1/23/2017
