This Product Features and Updates announcement for GPS Insight **Pro and Enterprise** includes updates for Mobile and Administrative.

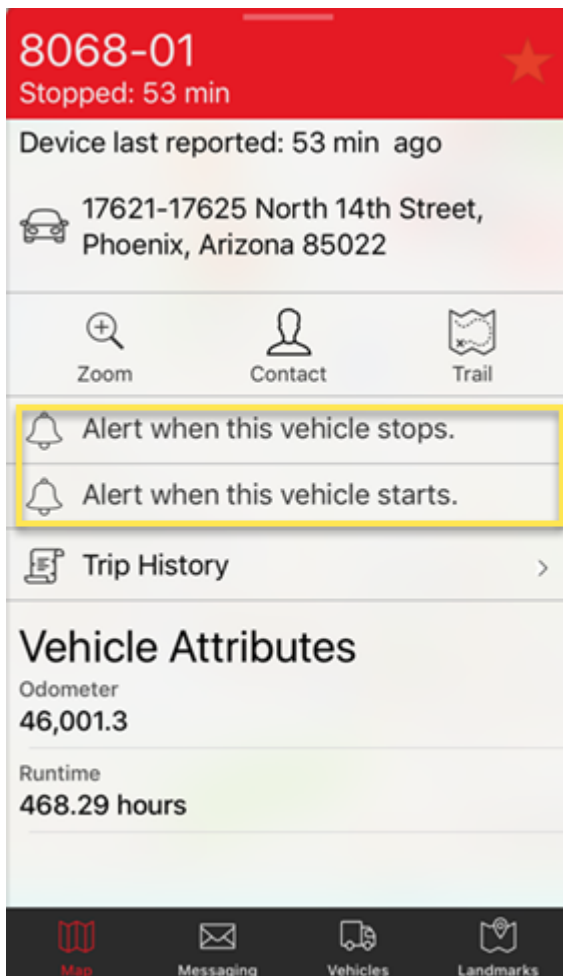

Mobile

GPS Insight Manager App (iOS) - Version 1.4.0

This update is now available from the [iTunes App Store](#) and includes the following:

Ignition On/Off Alert

You can now activate Ignition On/Off Alerts using the [GPS Insight Manager App](#) to receive notification of ignition on/off events. From the **Vehicle Card**, you can choose to be notified the next time (one time alert) the alert is triggered or to be notified every time the alert is triggered. All alerts activated in the App are reflected in the Portal and can be managed like any other alerts set up in the Portal.

See [Using the iOS Manager Map](#) for additional information and step-by-step instructions on activating the alert.

Administrative

Ignition Alert - New Option

The option to push an ignition **alert** notification from the Portal, via the Alerts Manager Page (**Accounts > Manage Alerts > Open > Ignition Alert**), to the Manager App is now available. To select this option, click on the checkbox next to “Send push notification to Manager App” while **adding/editing** an ignition alert in the Portal.

Create new Ignition Alert
