This Product Release Notes announcement for GPS Insight **Pro** and **Enterprise** customers includes updates for Map and Bug Fixes.

Map

Map - Live Weather Radar

You can now view the daily weather radar on the map! Simply click the Weather button on the right side menu to activate the radar.

- Daily weather is available 12 hours in advance.

Legend

Once the weather feature is turned on, a color legend will appear showing light to intense weather severity.

Weather Opacity Preferences

You can manage your weather opacity preferences on the Map Preferences card. Simply click the Preferences button in the right side menu, then adjust the opacity.

Note. This Weather Forecast feature is unavailable on Internet Explorer, but current weather is still viewable.

For additional map information, see [About the Map - New](#).

Bug Fixes

Bug Fixes & Enhancements

- Bugs were fixed for the Portal and Mobile Apps
- UX enhancements were deployed.
