This Product Release Notes announcement for Standard and Enterprise customers includes notification of updates for the Portal.

Portal

Introducing the new Driving Violations Report

With the new Driving Violations Report, the previous Driving Violations Summary and Driving Violations Details reports have now been merged, saving you time from needing to run two separate reports. Additionally, this new report offers the ability to filter by events, top percentage or the number of violations, change the selected time frame, and other selected report parameters directly from within the report instead of running a new report to select new parameters.

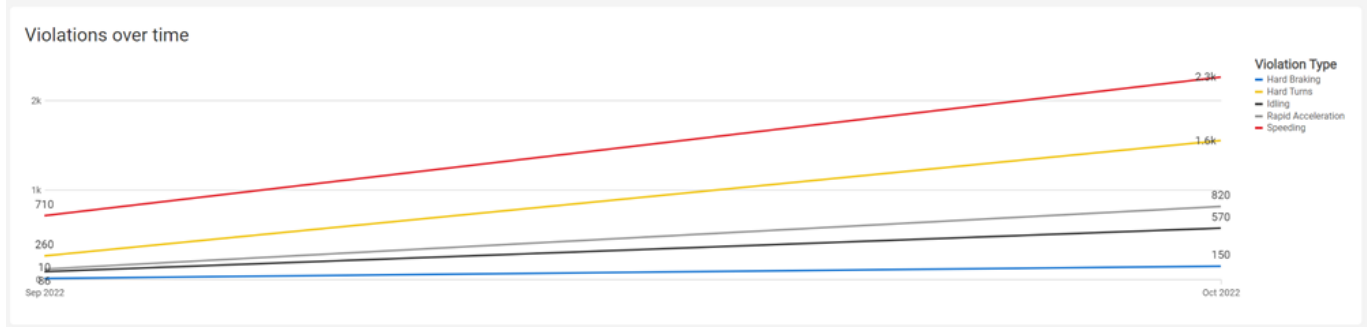

Note. This report is available to customers with PNP, GPSI-3900, and other supported devices.
