This Product Release Notes announcement includes notification of updates for the Portal.

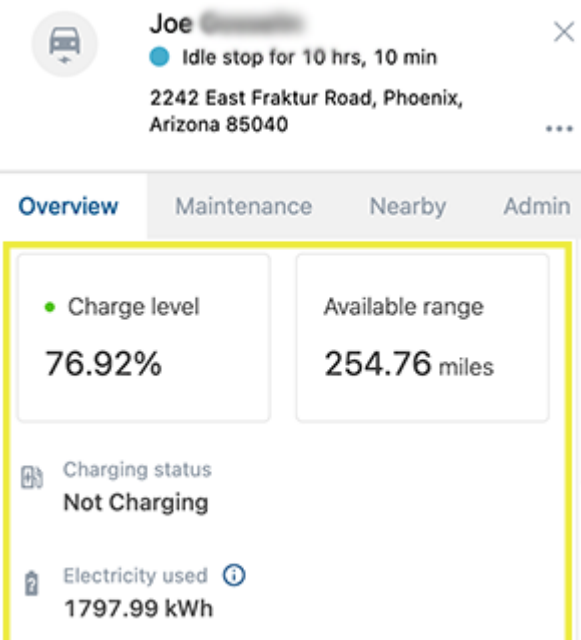

Portal

Introducing EV Data

EV data for your electric vehicles is now shown on Vehicle Cards from the Map Page in the Portal. EV data includes:

- Charge Level
- Available Range (supported vehicles only)
- Charging Status
- Electricity Used (lifetime summary beginning at device installation)

Note. This new feature is available for customers on the EV Fleet plan with electric vehicles equipped with **GO9** devices.

The screenshot shows a vehicle card for 'Joe' with a car icon and a close button. The card displays the following information:

- Idle stop for 10 hrs, 10 min
- 2242 East Fraktur Road, Phoenix, Arizona 85040

Below the card is a navigation bar with tabs: Overview (selected), Maintenance, Nearby, and Admin. The 'Overview' tab is highlighted with a yellow border and contains the following EV data:

Charge level 76.92%	Available range 254.76 miles
Charging status Not Charging	
Electricity used 1797.99 kWh	

To learn more, please visit [Vehicle Card Status Bar](#).

Additionally, you can now create an alert to send notification of low battery for EVs using the Diagnostic Alert from the [Alert Page](#) in the Portal.
