

This Product Release Notes announcement includes an update for the Portal.

Portal

New Alert Available: Jamming

The Jamming Alert is now available to customers with supported devices (GPSI-5000, PNP, AT-3000). This alert offers two types, GPS or Radio, and can be created and managed from the Alerts page in the Portal.

This alert is highly valuable in increasing fleet safety to protect assets. Even though Jamming devices are illegal in the United States, they are unfortunately still available on the market, and for those with assets used internationally, this alert empowers you to be proactive in protecting your fleet.
