This Product Release Notes announcement for GPS Insight **Pro and Enterprise** customers includes updates for Portal, Map, ELD, and bug fixes.

## Map & Portal

### Camera

- **Map Filters:** You can now filter vehicles by **Camera** in the Filter Drop-down menu.

- **Camera Events:** **Camera Events** are now available in the Driver Card.

## Trip History & Location Playback

- **Date & Time Modal:** In Location Playback mode, a modal will appear for you to select the date and time you would like to view trip history in your fleet. The time modal is set at a 3 hour maximum to pull trip data.

- **Trip History Time Box:** A time box has been added to the Trip History window to allow you to drill-down in time to see your trips.

View up to a 24 hour time range.

## Vehicle Card

- **Device Serial Number:** You can now view the **Device Serial Number** on vehicle cards. This will help you identify the device associated with each vehicle in your fleet.

## ELD

### ELD Flex and Focus

#### Key Feature Updates

- Cycle Duty Summary screen is now available from the Options button
- Drivers can now 'undo' claiming an Unidentified Driver event
- An automatic prompt will now appear to change to Yard Move status when a vehicle stops inside a 'Yard' defined by a geofence in the ELD Focus portal
- The app now changes from an 'automatic' Driving event to a 'manual' Driving event when a vehicle's engine shuts down - this allows a driver to edit the driving event that may be incorrectly recorded after an engine shutdown occurs, in case of situations where the driving status does not end properly after a

vehicle's ignition shuts off

## Key Bug Fixes

- Fixed issue for an incorrect availability calculation on the mobile app for drivers using the Split Sleeper Berth option for US Property-Carrying rules
- Fixed issue for corner cases causing logs to become uncertified when they shouldn't
- Improved performance in regards to the handling of provisioning failures
- Fixed issue where a DVIR item marked as NA is being counted as Failed
- Fixed issue where adding a driver and equipment in an account with Logbookproduct only displays a note stating it might increase monthly charges

## Other Updates Available

In addition to the above, we now have a fix for users experiencing Vehicle ID issues. It should be noted this fix is a separate update than the main application, however it's recommended that any MDT receiving updates should receive both updates at the same time - kill two birds with one stone.

## Device Updates

If you'd like to have these updates applied to your tablets then please feel free to contact our HOS team ([hos@gpsinsight.com](mailto:hos@gpsinsight.com)) for further help.

## Bug Fixes

### Bug Fixes & Enhancements

- Bugs were fixed for the Portal and Map.
- UX enhancements were deployed.
