This Product Release Notes announcement for Standard and Enterprise customers includes updates for the Portal.

Portal

Precision Updates - Follow and Isolate Vehicles

You can now isolate or follow specific vehicles at the click of a button!

Isolate mode makes viewing and following specific vehicles on the map much easier. This tool is great for those who have a large number of vehicles that want to show one particular vehicle when selected on the map.

You can toggle Follow and Isolate mode in the Edit Vehicle menu in the Vehicle Card.

The screenshot shows a vehicle card for ID 8002-04. The card displays a car icon, speed (35 mph NNW, 42 max), and address (34075 California 1, Gualala, California). A menu is open over the card with the following options: Edit Vehicle, Follow (toggle off), Isolate (toggle on), Create Landmark, Send Dispatch, View History, Copy Address, Copy Lat/Lon, and Open in Google Maps. The left sidebar shows tabs for Overview, Trips, and Ne, and a Details section with fields for DRIVER (Assign Driver), ODOMETER (67,390 miles), RUNTIME (1268.044 hours), TEMPERATURE (N/A), COOLANT TEMP (N/A), IGNITION (on), LAST REPORTED (37 minutes ago), and DEVICE SERIAL NUMBER (4674158529).

For more information on isolating and following vehicles, see: [Using Precision Updates](#) and [Using the Vehicle Card](#).

Bug Fixes

Bug Fixes & Enhancements

- Bugs were fixed and enhancements deployed for the Portal and reports.
