Introducing the new Driver Scorecard Report

With the new Driver Scorecard Report, you can view interactive graphs, summary totals, and detailed data providing insight into driver behavior from safety events in the form of a weighted score (A-F grade). This report allows you to utilize and leverage driver scorecard data to evaluate the risk of drivers in your fleet, identify risky drivers, acknowledge safest drivers, and evaluate driver behavior trends over time.

> **Note.** This report is available to customers with PNP, GPSI-5000, and other supported devices. Driver feature is available to Enterprise customers only, please contact your Account Manager for additional information to learn more.

Please see Using the Driver Scorecard Report for additional information.
