Introducing Aux Camera Support for Fleet All-in-One!

□ What is Launching?

Auxiliary cameras are now supported as an accessory to the Fleet All-in-One AIR II tracker and camera solution, enabling customer fleets of any size to expand visibility both inside and outside their vehicles. Supporting up to two cameras, auxiliary camera integration reduces blind spots and enhances the effectiveness of the customer's camera program, providing additional coverage for driver exoneration, insurance claims, and other operational needs.

□□□ Is this for me?

Typical deployments include buses, tractor-trailers, box trucks, garbage trucks, and other large vehicles where enhanced visibility provides valuable context for improving safety and supporting driver exoneration.

□ Benefits

- Expand visibility both inside and outside vehicles, enhancing situational awareness.
- Reduce blind spots by supporting up to two auxiliary cameras for broader coverage.
- Improve operational outcomes with added coverage for driver exoneration, insurance claims, and other fleet management needs.
