Introducing the BeBatt Asset Tracker

What's Launching

Meet the BeBatt, a battery-powered, low-power 5G asset tracker built for the places your equipment actually goes. As part of the battery-powered tracking device family, the BeBatt pairs built-in Wi-Fi for indoor location with a supercapacitor that helps manage battery life, all inside a rugged IP69K-rated enclosure.

Key features include:

- IP69K rugged enclosure that stands up to dust, water, etc.,
- Battery life of 10+ years, depending on update rates, sensor configuration, and available cellular technology
- Indoor location using Wi-Fi BSSID technology

Benefits

- **See assets indoors, not just outdoors**. When equipment is inside a warehouse, shop, or storage facility, Wi-Fi-based location helps you keep track of it where GPS alone may fall short.
- **Spend less time on maintenance.** With a battery built to last 10+ years and a supercapacitor supporting power management, you can install the BeBatt and focus on your operation instead of battery swaps.
- **Deploy with confidence in tough conditions.** The IP69K-rated enclosure is designed to handle dust, water, and harsh environments, so your trackers keep working wherever your assets are.
- **Stay connected with 5G.** Low-power 5G connectivity helps keep location updates flowing while conserving battery.
