

## Odometer Details: New Insights into Odometer Data

We're introducing a more transparent and trackable waypoint management system to improve the accuracy and visibility of odometer data changes in the Portal and in the GPS Insight Manager App.

### What's Launching?

This update helps clarify how odometer readings are calculated and displayed by giving you full visibility into any adjustments that occur. Odometer details are now available from a vehicle's Vehicle Card in the Portal and in the Manager App.

The detailed view also provides quick access to the comprehensive [Odometer History report](#).

### Benefits

These enhancements provide you with a more transparent, accurate, and reliable view of vehicle mileage resulting in the following benefits:

- Enhanced logging of all waypoint adjustments with clear user attribution
- Comprehensive history reporting showing all odometer changes over time
- Clear distinction between system-generated and manual adjustments
- Detailed before/after values recorded for every change
- Accessible history view integrated directly within vehicle details, with a link to the vehicle's full Odometer History Detail report

### Ready to Learn More?
